Dear Sir/Madam,

While going through the careers opportunities posted on LinkedIn, I came across the Software Engineer Intern position at Agilysys, Inc. After reading the job description specified, I found the role requirements align well with my qualifications and career interests. I strongly believe that the opportunity of interning at Agilysys, Inc will help me gain knowledge and experience contributing towards my future goal of becoming an efficient software engineer.

Currently, I am a Graduate Student at Syracuse University majoring in Computer Science. I have taken up courses like Design and Analysis of Algorithms, Internet Programming, Software Modelling and architecture, Object Oriented Programming in C++, Operating Systems(Linux-based) which have expanded my knowledge base and challenged as well as improved my analytical reasoning and problem-solving abilities. The coursework has exposed me to various technologies ranging from C#, ASP.Net, ReactJS, NodeJS, MVC, JavaScript to name a few. In the upcoming semesters, I intend to take up relevant courses with an aim to learn and acquire the understanding and skills required to become an efficient software engineer.

Previously, I worked as a Software Developer at Ingram Micro SSC Pvt. Ltd., India. I was part of the Document to Order team in the B2B (Business to Business) department. I was trained in various domains ranging from technical to project management to client interaction. With the training acquired, I worked on various projects for clients in the Asia Pacific region. The projects comprised of developing applications and web portals for order processing using the .Net framework with data storage support using the MS SQL Server. I really enjoyed working with the technical and business team leads and brainstorming about new approaches to get the projects delivered in an efficient and timely manner. The major project that my team worked on during my tenure at Ingram Micro was the Vendor Invoice management system. Working at Ingram Micro was an excellent learning experience and encouraged me to explore and master various areas in the evolving field of Computer Science.

In both my academic and professional life, I have always valued the necessity to be adaptable and to collaborate and work in a team. I strongly believe that these qualities coupled with diligence, hard work and dedication will bring the success one always dreams about. I hope to leverage these skills into the Software Intern role at your company. After reviewing my resume, I hope that you find me competent for the Intern role at Agilysys, Inc. I look forward to being given an opportunity to be a part of what I understand to be a challenging yet rewarding internship at your firm.

Thank you for your consideration and I look forward to hearing from you soon.

Sincerely,

Nivetha Ramachandran.
